

# 601GT Sticky Lizard™

MEDIUM  
Professional  
GLUEBOARD ILT

**The much anticipated, Gilbert® Sticky Lizard™ is here! Finally, a Gilbert® quality glueboard ILT that corner-mounts, mounts flat on a wall (vertically or horizontally), and, when necessary, may even be hung from eyebolts. Call it unique and versatile.**

You can get your Lizard with or w/o wings (shown above and at right). These (optional) Lizard wings reduce effectiveness a bit, but hide glueboards (and captured insects) from view. A different concealment strategy, black glueboards, are also available.

The Sticky Lizard™ features F20T12BL350 (or equivalent) 20 watt insect attractant lamps. The standard is to replace lamps annually.

Six foot, 3-wire grounded power cord. Standard 115v/60hz.

Guard door swings open for easy access to lamps, lizard wings, and glueboard(s) for periodic cleaning / replacement. Change glueboard(s) regularly, at least as often as local codes require.

Constructed of Aluminized steel (lifetime auto muffler material). Nickel-chromed guard door.

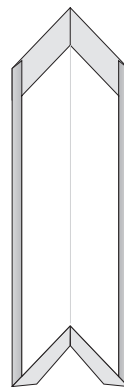

ONE YEAR WARRANTY: (Excluding lamps and glueboards).

**Dimensions:** 30-1/4" x 16" x 3"  
**Weight:** 16 lbs. **Ship wt.:** 22 lbs.

### OPTIONAL STICKY LIZARD WINGS Hide Glueboards & Caught Insects:

When vertical, glueboards either slip into standard clips on each side of lamps or are folded, placed into Lizard's wings, and held in place by gravity, guard door, and latch. When horizontal, the primary glueboard slips into a Lizard wing or clip in the bottom of the trap. A second (optional) glueboard will slip into the clip above the lamps

Lizard Wing  
(w/glueboard  
inserted)

This trap holds one or two of our large (21-7/8" x 4-7/8") or standard (16-7/8" x 4-7/8") glueboard(s).

**THE CORNER MOUNT ADVANTAGE** of the Gilbert 601 series of traps allow you to place the trap out of traffic (avoiding lift trucks) yet install your traps down low where they are most effective against flies.

# Gilbert® Manufacturing Plant

JONESBORO, AR, USA

**Don Gilbert**

**Company Founder  
Insect Light Trap Pioneer  
(1923-1993)**

Gilbert® has produced leading designs since Don Gilbert built the first, truly professional ILT in 1967. Gilbert® invented low mounting, corner mounting, multi-purpose portability, and superior catching ability.

Yet, it was not his trap designs, but his philosophy that was the true key to his success. Don's idea of ILTs, as only one tool in his bag, to be applied with a sincere desire to help customers in any way he could, was simple and honest. His efforts were so successful, Gilbert® was granted a registered trademark.

Don's son, David, now president, joined his father in 1981 and began applying what he knew of science to ILTs, picking his father's brain, doing his own research.

Gilbert® continues to offer the best in both glueboard and electrocuting ILTs and to lead the way away from gimmicks, toward true professionalism. Keep us informed of your experiences. Together, we will continue the fight for sincere, scientific use of professional ILTs.

All Gilbert® Professional ILTs are C-UL-US Listed and exceed all known codes - FDA, USDA, EPA, etc. We use only high quality component parts and warranty every Gilbert® trap.
