

### 747GT Will Hold Four Large Glueboards.

Removable tray holds two of our large (21-7/8" x 4-7/8") or standard (16-7/8" x 4-7/8") Glueboards for Touch-Free Maintenance.

Additional (optional) glueboards may be inserted into the clips (behind top lamp) to increase total glue area.

Gilbert® glueboards are scored for bending 5/8" edge. This is an optional feature to help retain glue and insects, especially when board is in vertical position.

The Gilbert® 747GT Sticky Bear™ is our largest, most powerful, glueboard light trap. It rivals the catching ability of a *Flying Lion™* (pg. 15).

Insect Attractant: Two F40BL350 (or equivalent) 40 watt lamps. Replace annually for continued performance.

Installation: Wall-mounted with keyhole slots. Low positioning almost always yields the best results for any ILT against flies. "Below 5 feet" is the general guideline. About 3 feet or waist high is effective and also easy to maintain.

Electrical: Six foot, 3-wire grounded power cord. Standard 115v/60 Hz. Maintenance: The Bear uses up to four glueboards. Spring-locked tray conceals glueboards, is secure, and yet easy to service. Nickel chrome guard swings up for easy access to lamps for cleaning and/or replacement. Change glueboards regularly, at least as often as codes require.

Construction Features: Frame and interior structure are aluminumized steel for strength. Beautifully finished in anodized aluminum with nickel chrome guard.

ONE YEAR WARRANTY (Excluding lamps, glueboards).

Dimensions: 53 1/8" x 13 1/8" x 5 5/8"  
Weight: 23 lbs. Ship Wt: 30 lbs.

# Gilbert® Manufacturing Plant

JONESBORO, AR, USA

**Don Gilbert**

**Company Founder  
Insect Light Trap Pioneer  
(1923-1993)**

Gilbert® has produced leading designs since Don Gilbert built the first, truly professional ILT in 1967. Gilbert® invented low mounting, corner mounting, multi-purpose portability, and superior catching ability.

Yet, it was not his trap designs, but his philosophy that was the true key to his success. Don's idea of ILTs, as only one tool in his bag, to be applied with a sincere desire to help customers in any way he could, was simple and honest. His efforts were so successful, Gilbert® was granted a registered trademark.

Don's son, David, now president, joined his father in 1981 and began applying what he knew of science to ILTs, picking his father's brain, doing his own research.

Gilbert® continues to offer the best in both glueboard and electrocuting ILTs and to lead the way away from gimmicks, toward true professionalism. Keep us informed of your experiences. Together, we will continue the fight for sincere, scientific use of professional ILTs.

All Gilbert® Professional ILTs are C-UL-US Listed and exceed all known codes - FDA, USDA, EPA, etc. We use only high quality component parts and warranty every Gilbert® trap.
